No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 161

NUMBER 1, SEPTEMBER 1993

M. ZACKRISSON AND P. ROYEN. A High-Resolution Study of the (0, 1) $B^4\Sigma_u^- - X^4\Sigma_g^-$ Transition of C_2^+ 1

D. S. CHEN, L. LI, X. T. WANG, LI LI, Q. HUI, H. MA, L. Q. LI, X. Y. XU, AND D. Y. CHUN. Pulsed PFOODR Spectroscopy of Triplet Rydberg States of $^7Li_2$ 7

R. J. J. M. STEENVOORDEN, M. H. VASCONCELOS, P. G. KISTEMAKER, AND T. L. WEEDING. Rotational Band Analysis of Vibrational Modes 6 and 7 of Benzene Isotopomers Using REMPI and TOF-MS 17

HE WANG AND JAMES L. GOLE. A Chemiluminescent and Laser-Induced Fluorescent Probe of a New Low-Lying $A'\Omega = 1$ State of Gaseous AgF 28

FRANK HOLLAND, ULRICH FLEISCHER, ARMIN KLESING, AND DIETER H. SUTTER. Magnetic Susceptibility Anisotropy, Molecular Quadrupole Moment, and the Sign of the Electric Dipole Moment in OCCCS: A High-Resolution Microwave Fourier Transform Study Combined with IGLO Calculations 44

GEORGES GRANER. About Hot Bands and PAPE Bands in Spectra of C_{3v} Symmetric Top Molecules 58

G. GRANER, R. FARRENQ, G. BLANQUET, J. WALRAND, AND K. PEKKALA. A New Analysis of Rovibrational Bands of Propyne in the 10-, 16-, and 30-μm Regions 80

STEPHEN C. ROSS. Vibrational Frequencies from Microwave Data: Semirigid Bender Prediction of the ν_{11} Bending Fundamental of HC_5N 102

MOHAMMAD ELSHAKRE, CHUN HE, L. P. GOLD, AND R. A. BERNHEIM. High-Resolution Infrared Spectroscopy of the ν_2 Band of CH_3NC 109

TAKESHI SAKAIZUMI, KENJI SEKISHITA, KOUICHI FURUYA, YOSHITO TETSUDA, KOUJI KANEKO, OSAMU OHASHI, AND ICHIRO YAMAGUCHI. Microwave Spectrum and Molecular Structure of Methyl Cyanate 114

D. L. JOO, DENNIS J. CLOUTHIER, B. LAU, AND A. J. MERER. An Analysis of the High-Resolution Infrared Spectrum of the ν_3 Band of Formyl Chloride 123

BIAGIO VELINO, ELISABETTA CANÈ, LAURA GAGLIARDI, AGOSTINO TROMBETTI, AND WALTHER CAMINATI. Microwave Spectra of Benzotriazole and Pyrimidinotriazole 136

JEFFREY T. PETTY AND C. BRADLEY MOORE. Transient Infrared Absorption Spectrum of the ν_1 Fundamental of *trans*-HOCO 149

J.-M. FLAUD, C. CAMY-PEYRET, H. BÜRGER, AND H. WILLNER. High-Resolution Analysis of the ν_2, $2\nu_2$, ν_1, and ν_3 Bands of $H_2{}^{80}Se$ 157

R. J. KSHIRSAGAR AND V. A. JOB. Vibration–Rotation Bands of Phosphine-d_1: Analysis of the ν_{3a} and ν_2 Bands 170

IGOR N. KOZIN AND PER JENSEN. Fourfold Clusters of Rovibrational Energy Levels in the Fundamental Vibrational States of H_2Se 186

WALTHER CAMINATI, BIAGIO VELINO, AND ROBERTO DANIELI. Hydrogen Bond, Tautomerism, and Structure of 2-Nitroresorcinol: A Microwave Spectroscopy Study 208

UFFE GRÅE JØRGENSEN AND PER JENSEN. The Dipole Moment Surface and the Vibrational Transition Moments of H_2O 219
RICHARD A. COPELAND, BABU R. CHALAMALA, AND JOHN A. COXON. Laser-Induced Fluorescence of the $B^2\Sigma^+$–$X^2\Pi$ System of OH: Molecular Constants for $B^2\Sigma^+$ (v = 0, 1) and $X^2\Pi$ (v = 7–9, 11–13) 243
V. LEMAIRE, B. LEMOINE, AND F. ROHART. Measurement with a Frequency-Locked Diode Laser Spectrometer of the CO_2 Broadening of the $2\nu_2$ and $3\nu_2 \leftarrow \nu_2$ Bands of OCS 253
A. AINETSCHIAN, W. A. KREINER, M. P. COQUARD, AND M. LOËTE. Sideband Double Modulation: The Ground State Dipole Moment of SiF_4 264
J. PLÍVA, J. W. C. JOHNS, AND Z. LU. High-Resolution Study of the Difference Band $\nu_{17} - \nu_{20}$ of Benzene 269
D. BAILLY. 15-μm Emission F.T. Spectra of $^{12}C^{16}O_2$ Excited to High Vibrational Levels: Transitions $v_1'v_2''v_3 \rightarrow v_1v_2^lv_3$ (v_3 = 1, 2, 3) 275
N. ANSELM, K. M. T. YAMADA, R. SCHIEDER, AND G. WINNEWISSER. Measurements of Foreign Gas Pressure Shift and Broadening Effects in the (1–0) Band of CO with N_2 and Ar 284
G. WLODARCZAK, J. GRIPP, AND W. STAHL. The Hyperfine Structure of OCSe 297
C. M. GITTINS, N. A. HARRIS, R. W. FIELD, J. VERGÈS, C. EFFANTIN, A. BERNARD, J. D'INCAN, W. E. ERNST, P. BÜNDGEN, AND B. ENGELS. Analysis and Deperturbation of the $C^2\Pi$ and $D^2\Sigma^+$ States of CaF 303

NOTE

E. N. KARYAKIN, G. T. FRASER, B. H. PATE, AND R. D. SUENRAM. Electric-Resonance Optothermal Spectrum of the $K_a = 1 \leftarrow 0$ Band of DHO–DOD: Direct Observation of the $1 \rightarrow 4$ Tunneling Splitting 312

LETTER TO THE EDITOR

M. LIEDTKE, R. SCHIEDER, K. M. T. YAMADA, G. WINNEWISSER, S. P. BELOV, AND A. F. KRUPNOV. The $^rQ_3$ Branch of HSSH at 980 GHz: Anomalous K-Doubling of the K_a = 3 Levels 317

JOURNAL OF MOLECULAR SPECTROSCOPY

INFORMATION FOR AUTHORS

Manuscripts describing original work in areas of molecular spectroscopy should be submitted to K. Narahari Rao, Department of Physics, The Ohio State University, Columbus, Ohio 43210.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Molecular Spectroscopy* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. As in the past, the Publisher will continue to grant all reasonable requests for permission to reproduce material from contributions appearing in the Journal. However, it is recommended that such requests be first made to the Editor for appropriate action.

Form of Manuscripts. Manuscripts in duplicate should be typewritten with wide margins on high-quality bond paper using double or triple spacing throughout. Copies should include figures, tables, etc.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and affiliation. At the bottom of this page, the number of manuscript pages, figures, and tables should be noted. The second page should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. The third page should contain an abstract.

"Letters to the Editors" will be devoted to the announcement of important results with a minimum of delay. "Notes" will also be published as speedily as possible. Contributions to this section containing "Letters to the Editors" and "Notes" should not exceed 1½ printed pages, including figures, equations, and tables. They should follow the style and form used for manuscripts except that they need not be accompanied by abstracts.

List of Symbols. Authors should submit a complete list of symbols identifying each for the printer. This list will not appear in print.

Tables. Tables are to be numbered consecutively with Roman numerals. The table numbers and titles should be listed on a separate sheet. *Tables will be reproduced as camera-ready copy.* Therefore, they should be carefully and clearly typed since, except for reduction in size, they will appear exactly as submitted. If the tables will be prepared using a word processor or computer, it is recommended that a daisy wheel printer be used. If a daisy wheel printer is unavailable and you will be using a dot matrix printer, it is important that the density of the dots (i.e., the number of dots in the matrix) be sufficient that the numbers do not appear broken. Short tables of one or two pages in length should be typed double-spaced and planned to fit an area of 5 × 8¼ in. after reduction of no more than 40%. Lengthy tables should be typed single-spaced and divided into sections so that each section can fit in the area indicated. *Repeat column headings when dividing tables.* No corrections can be inserted after the line cuts have been made. Do not use a comma to separate groups of 3 digits; merely use a space. For instance: 2,526,000 should be typed 2 526 000. Insert a zero in front of a decimal point when it applies. For instance, instead of .36, use 0.36.

Footnotes to tables should be identified by superscript letters and placed at the bottom of the page containing the table. Footnotes in the text should be identified by superscript numbers and listed consecutively on a separate page.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Reference to equations should use the form Eq. (3).

References. References should be cited in the text by underlined number in parentheses (in order of appearance). The literature cited should appear on a separate page (double-spaced) and should be listed consecutively according to reference number. Following the reference number, the author's initials, last name, journal name, volume, inclusive pagination, and year (in parentheses) should be listed in that order. Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index,* 1985. For book references give the author's name, name of book, editor's name (if any), edition (if other than first), chapter or page number, publisher's name, place, and year of publication.

Figures. All illustrations should be numbered as figures in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page (5 × 8¼ inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent. Illustration copy should measure no larger than 12 × 15 inches. Each figure should be identified in a margin with the name of the journal, author's name, and figure number. Photocopies of figures are not acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Proofs. Proofs will be sent to the author, with reprint order forms. Fifty reprints of each article are granted free of charge, and additional copies may be purchased. Authors will be charged for excessive alterations.

Personal Computer Disks. Manuscripts may be submitted to *Journal of Molecular Spectroscopy* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material and art must also be prepared as camera-ready copy; see the sections on Tables and Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

Associate Editor for North America
R. M. Glaeser, *University of California, Berkeley*

The **Journal of Structural Biology** publishes papers dealing with the structural analysis of biological matter at all levels of organization by means of light and electron microscopy, X-ray diffraction, nuclear magnetic resonance, as well as other imaging, diffraction, spectroscopic, or scanning probe techniques yielding structural information.

The field covered by the journal extends from the structural organization of cells and tissues, their membranes, compartments, organelles, and supramolecular assemblies, to the structure and conformation of proteins and nucleic acids at the molecular and submolecular level, with emphasis on high-resolution structural investigations.

Experimental work which correlates structural results with functional, biochemical, biophysical, immunological, or genetic data of the system under study is preferred. Combination of complementary or converging methods of analysis is encouraged.

Volumes 110-111 (1993), 6 issues
